Species Modeling Report

Reddish Egret

Egretta rufescens

Taxa: Avian

Order: Ciconiiformes

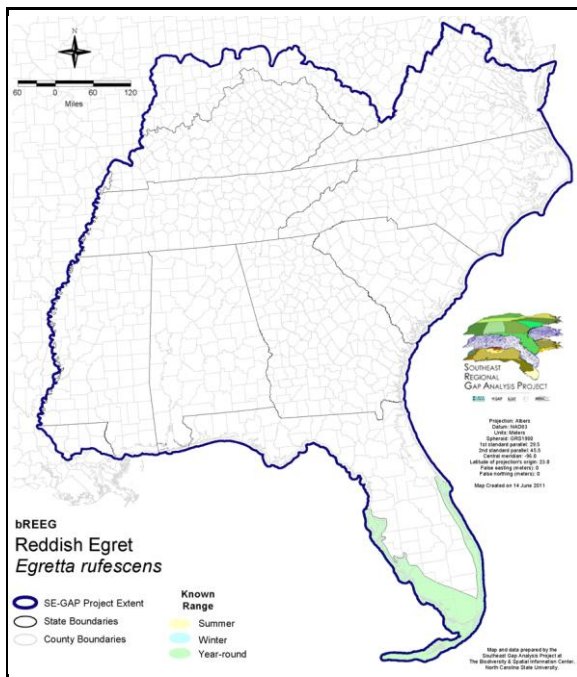

Family: Ardeidae

SE-GAP Spp Code: **bREEG**

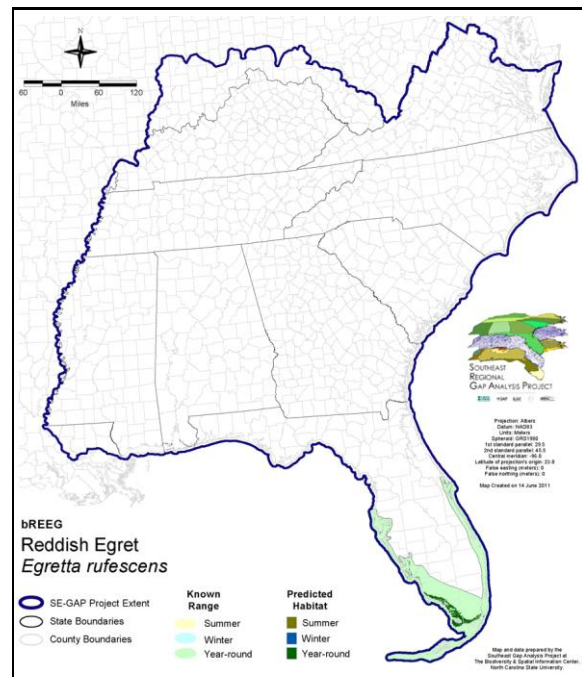

ITIS Species Code: 174824

NatureServe Element Code: ABNGA06060

GAP Status 1: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a natural state within which disturbance events (of natural type, frequency, and intensity) are allowed to proceed without interference or are mimicked through management.

GAP Status 2: An area having permanent protection from conversion of natural land cover and a mandated management plan in operation to maintain a primarily natural state, but which may receive use or management practices that degrade the quality of existing natural communities.

GAP Status 3: An area having permanent protection from conversion of natural land cover for the majority of the area, but subject to extractive uses of either a broad, low-intensity type or localized intense type. It also confers protection to federally listed endangered and threatened species throughout the area.

GAP Status 4: Lack of irrevocable easement or mandate to prevent conversion of natural habitat types to anthropogenic habitat types. Allows for intensive use throughout the tract. Also includes those tracts for which the existence of such restrictions or sufficient information to establish a higher status is unknown.

PREDICTED HABITAT MODEL(S):

Year-round Model:

Habitat Description: In FL typically nests on mangrove keys and dredge-material islands in thickets (typically mangroves) often over water (small creeks or interior flooded flats). Forages on shallow coastal flats, shallow bays, creeks, ponds and lagoons in salt water habitats (Lowther and Paul 2002). M. Rubino, 17nov04.

Hydrography Mask:

Brackish/Saltwater Only

Utilizes flowing water features with buffers of unlimited from and 250m into selected water features.

Utilizes open water features with buffers of unlimited from and 250m into selected water features.

Utilizes wet vegetation features with buffer of unlimited into selected vegetation features.
